1. Introduction

The EPC+ project aims at developing and promoting new business models for the implementation of energy efficiency services through cooperation between Small and Medium-sized Enterprises (SMEs).

Through cooperation innovative energy efficiency services (EES) can be offered. Cooperation enables SMEs to offer novel and high quality energy services which they could not provide as stand-alone companies. Such services are serious alternatives to standard energy efficiency services provided by large energy service companies (ESCOs) and may provide promising opportunities in terms of innovation and services.

The cooperation of SMEs with the aim to offer joint EES to the market is described as a SPIN.

A SPIN (SME Partnership for Innovative Energy Services) is an organized cluster of independent companies, mainly SMEs, that jointly supply energy efficiency services and that have a structured long-term collaboration with commonly agreed objectives.

One of the objectives of the EPC+ project was the development of an international EPC+ platform.

The international EPC+ platform is an international '**market place**', where - **according to commonly agreed rules** – its members can safely **exchange valuable know-how** and **develop EPC-models and SPIN-concepts**.

The international EPC+ platform started in July 2015 using the “Energy Efficiency Network Europe” as a more commercial name. “Platform” and “network” are used as synonyms.

20 regular meetings have been organised between the start of the platform and the end of the project. The minutes of these 20 meetings are added to this report.

Additional meetings were organised at the network level to discuss specific topics. The minutes of these specific meetings are not included in this report but are added to the report describing valuable information exchanges and/or joint developments (D6.5).
